Los Angeles Jobs by Occupation, 2006 to 2008	57

Section One: Introduction

This report details the findings of research on the overall health of California's arts-related creative economy. The strongest indicator of this health is a region's score on the Creative Vitality Index™ (CVI™). The CVI™ is a robust and inclusive measure of the economic vitality of the arts and arts activities in a specified geographic or political region of the United States. Rigorously constructed and updated annually, a region's CVI™ is a credible and clear data source for arts research and advocacy purposes.

What is an Index?

An index is generally an efficient means of summarizing quantities of interrelated information and describing complex relationships. An index can be, as in the case of the CVI™, a single indicator of multiple variables and interaction between these variables. Changes in an index will reflect changes in the data used to generate the index. Standardization and unification of data mean that indexes are ideally suited for comparative analysis. The comparative nature of the CVI™ has added analytical and policy value.

What is the Creative Vitality Index™?

The Creative Vitality Index™ (CVI™) measures annual changes in the economic health of an area by integrating economic data streams from both the for-profit and nonprofit sectors. Using per capita measurements of revenue data from both for-profit and nonprofit entities as well as job data from a selection of highly creative occupations, the research aggregates the data streams into a single index value that reflects the relative economic health of a geography's creative economy. The CVI™ provides an easily comprehensible measure of economic health to help communicate information from a broad arts coalition to policy makers and stakeholders. This longitudinal data allows for compelling year-to-year comparisons as well as cross-city, county, and state comparisons. The CVI research system also provides users with a series of reports on the rise and fall of key data factors measured by the Index. The CVI™ goes beyond an annual tally of what is often inflation-driven growth in the non-profit art sector. Instead, it is a more inclusive reporting mechanism that is rooted in robust data streams that reflect the entire arts-based creative economy.

The Creative Vitality Index™ is a resource for informing public policy and supporting the work of advocates for creative economies. CVI™ reports have been used as a way to define the parameters of an area's creative economy and as a means of educating communities about the components and dynamics of a creative economy. The CVI™ is frequently used as a source of information for arts advocacy messaging and to call attention to significant changes in regional creative economies. This research has also been used to underscore the economic relationships between the for- and nonprofit sectors and as a mechanism for diagnosing a region's creative strengths and weaknesses.

What does the Creative Vitality Index™ Measure?

The CVI measures a carefully selected set of economic inputs related to the arts and creativity in a given geographic area, with measurements of both for-profit and nonprofit arts-related activities. The index has two major components including measurements of community participation based on per capita revenues of arts-related goods and services, and measurements of per capita occupational employment in the arts. The weighted indicators within the community participation portion of the index are the following: nonprofit arts organization income, nonprofit humanities organizational income, per capita book store sales, per capita music store sales, per capita photography store sales, per capita performing arts revenues, and per capita art gallery and individual artist sales. These indicators account

for sixty percent of the overall index values. A forty percent weighting has been assigned to occupational employment in the arts that captures the incidence of jobs associated with measurably high levels of creative output.

The rationale for this approach is the cause-and-effect relationship between participation levels and jobs. The underlying theory is that public participation in the arts or public demand for arts experiences and events ultimately drives budgets and organizational funding levels, which in turn support artists and art-related jobs within the economy.

Where does Creative Vitality Index™ Data Come From?

Index data streams are analyzed by WESTAF and taken from two major data partners: the Urban Institute's National Center for Charitable Statistics, and Economic Modeling Specialists, Inc (EMSI). The Urban Institute's National Center for Charitable Statistics aggregates information from the Internal Revenue Service's 990 forms. The forms are required to be submitted by nonprofit 501(c) organizations with annual gross receipts of \$25,000 or more; however, organizations with smaller revenues also occasionally report.

EMSI uses a proprietary economic modeling technique to capture industry and occupational employment data. A brief synopsis of the data sources employed in this model are outlined as follows:

Industry Data

In order to capture a complete picture of industry employment, EMSI combines covered employment data from Quarterly Census of Employment and Wages (QCEW), produced by the Department of Labor, with total employment data in Regional Economic Information System (REIS), published by the Bureau of Economic Analysis (BEA) and augmented with County Business Patterns (CBP) and Nonemployer Statistics (NES), published by the U.S. Census Bureau.

Occupation Data

Organizing regional employment information by occupation provides a workforce-oriented view of the regional economy. EMSI's occupation data are based on EMSI's industry data and regional staffing patterns taken from the Occupational Employment Statistics program (U.S. Bureau of Labor Statistics). Wage information is partially derived from the American Community Survey. The occupation-to-program (SOC-to-CIP) crosswalk is based on one from the U.S. Department of Education, with customizations by EMSI.

Report Organization

There are three sections to this report following the introduction: 1) a preview of key research findings; 2) a detailed report on the creative vitality of California; and 3) a thorough overview of the CVI™ and its potential uses. Findings in the data preview section include the CVI™ values of the study region compared to the nation and additional regions of interest. Additionally, select economic figures from the Index are presented. Detailed description and analyses of the data are documented in the subsequent technical report section. The fourth section outlines the original CVI™ project's core assumptions, reports on the construction and rationale for the formulae used to arrive at an Index value, and provides additional justifications for the use of various annual streams of data that undergird the CVI™. Here you will also find suggested uses for the CVI™.

Communicating CVI™ Data

Different state, local and regional organizations have undertaken multiple communication strategies for publicizing the CVI™. WESTAF has found that the best strategy for

communicating CVI™ information often relies on the specifics of organizational needs. WESTAF is willing to consult individual agencies free of charge regarding communication strategies after CVI™ data have been finalized. Potential strategies include: creating low-cost communication pieces and press releases "in-house"; creating more formalized communication; using a professional designer; including a number of stories related to the local creative economies; forming working groups to discuss the creative economy and long term messaging strategies given CVI™ data; commissioning in-depth research to investigate certain aspects of CVI™ data apparent in the overall CVI™ results; and using CVI™ data as an internal policy formulation document, while communicating data to specific key stakeholders, such as legislators and executives.

Policy Implications

The CVI™ does not offer an explanation of the multitudinous causal factors contributing to the creative vibrancy of a region. The CVI™ does offer a descriptive numerical value of cultural vibrancy based on economic inputs. This descriptive data can be helpful in articulating and tracking the relative strengths of an area's creative economy over time; providing indications of particular cultural strengths within an area; providing information to help guide cultural planning efforts; and providing direction for additional research into more specific aspects of a region's creative economy.

Initially, the CVI™ can be used as a communication and advocacy tool for state and local arts agencies to address the importance of the creative industries (both for-profit and nonprofit) to key stakeholders, legislators, the business community, and the public at large. This has been done effectively in many areas by presenting and communicating data highlights and creative economy success stories. Communication and coalition building through the presentation of research can help advance sound arts policy.

Given the descriptive nature of CVI™ data, CVI™ reports can also provide cultural planners, arts advocates, and state and local arts agencies with base level data during policy making efforts, strategic planning efforts, possible program creation, and decision making regarding when and where to allocate resources. While the CVI™ does not directly provide answers to difficult policy questions, it does allow for a more informed decision making process.

A number of key questions for California's creative economy are raised by the CVI™ report, including but not limited to the following:

- 1) How can California set benchmarks for creative economic growth?
- 2) How can areas within and surrounding California work together to most effectively grow the creative economy throughout the state?
- 3) Given CVI™ findings, what future in-depth research or local analyses might be valuable?

Section Two: Data Preview

A region's Creative Vitality Index[™] value is compared to a national baseline score of 1.00. For example, a region with a CVI[™] value of 1.30 has a stronger creative vitality score than the nation as a whole by 30%. A CVI[™] value as compared to a specific region—a county, state, or combined area—can also be generated. The unique geographic sensitivity of this measure means that arts advocates and policy makers have a clear and concise understanding of their particular region.

California to the United States, 2008: 1.44

Interpretation: The CVI™ value of 1.44 reflects the strength of the region's creative economy compared to the nation. From 2006 to 2008, California's CVI™ value remained stable, increasing slightly from 1.43 to 1.44 over the three year period. California shows strong CVI™

values when compared to the nation in every category included within the CVI™. California also outperforms the nation on a per capita basis within seven of the eight CVI™ categories. The best performing individual CVI™ values include: individual artists, writers and performers, as well as performing arts participation. The strength of commercial creative industries in Los Angeles contributes heavily to the advantages held by California in these categories.

Los Angeles to the United States, 2008: 2.68

Interpretation: The value of 2.68 reflects the strength of the Los Angeles creative economy compared to the nation. This pattern is consistent from 2006-2008, showing the region's CVI™ growing from 2.58 to 2.68 over the three year period. Los Angeles shows strong CVI™ values when compared to the nation in every category included within the CVI™. Los Angeles also outperforms the nation on a per capita basis in all eight CVI™ categories. The best performing individual CVI™ values include: individual artist, writers and performers, as well as performing arts participation.

Additional Data Points

CVI[™] data streams are analyzed by WESTAF and taken from two major data partners: the Urban Institute's National Center for Charitable Statistics, and Economic Modeling Specialists, Inc (EMSI). The totality of data from these streams is presented in the following section. Select data points in this region, for example, are the following:

- The California Creative Economy remained strong compared to the nation during a time of economic recession.
- Jobs within highly creative occupations continued to grow in California; despite economic conditions, these jobs increased at a rate of 4%.
- The Central Sierra Region showed significant job growth in creative occupations during this time period, with job growth of 25%.
- Occupations within the film industry continued to show the highest statewide concentration of employment per capita among creative occupations.
- Strong occupational growth was seen in technical occupations related to audio and video equipment and sound engineering.
- Occupational growth within public relations continued to be strong in California.
- Individual Artists, Writers and Performers continue to earn revenues at a much higher per capita rate than the nation as a whole.
- In 2008, there were over 686,000 highly creative jobs in California.
- Over the past three years, Los Angeles County's CVI value exceeded the national baseline by over 168% and continues to increase.
- In 2008, over 4,800 nonprofit organizations in California reported to the IRS and were classified as arts, culture and humanities organizations.
- In 2008, nonprofit arts organizations in California earned revenues of over \$2.1 billion at a rate of over \$58 per person--a rate 22% greater than the national average.
- In 2008, musical instrument retailers in California earned over \$468 million at a rate of nearly \$13 per person--a rate 27% greater than the national average.
- In 2008, photography retailers in California earned over \$202 million at a rate of nearly \$6 per person--a rate 17% greater than the national average.
- In 2008, book and record retailers in California earned over \$1.3 billion at a rate of over \$37 per person--a rate 32% greater than the national average.
- In 2008, art galleries and art dealers in California earned over \$686 million at a rate of over \$18 per person--a rate 32% greater than the national average.
- In 2008, independent artists, writers and performers in California earned over \$12 billion at a rate of over \$327 per person--a rate 235% greater than the national average.
- In 2008, companies and organizations involved in the performing arts in California earned over \$3.2 billion at a rate of over \$88 per person--a rate 92% greater than the

- national average.
- Creative occupations highly concentrated in California include: Film and Video Editors, Media and Communication Equipment Workers, Sound Engineering Technicians, Actors and Camera Operators.
- Creative occupation concentrations correlate to participation data showing high index values for independent artists, writers and performers and for performing arts participation- the combination of these data points indicate that the commercial film and music industries within California are significant contributors to the California economy and comprise a primary catalyst for creative growth in California.

Section Three: Creative Vitality Report Details

It is important to recall that the CVI™ score of this region is always compared to a score of 1.00. While a region might not be at the 1.00 level, this does not indicate an absence of activity. Here, it can be useful to look at the relative strength of the categorical index values being examined. Additionally, looking at refined state and regional contexts can give valuable insight to how a "low performing" region might actually be contributing positively within to a state and regional economy.

A few key terms used in the CVI™

Index: summarizes multiple sources of data into a single indicator, using one number to describe a complex set of variables, activities, and events. A few of the best-known indexes are the Dow Jones Industrial Average, the Body Mass Index (BMI) and the Consumer Price Index (CPI).

Per Capita: most simply put, per capita means the average per person. In the context of the CVI™, per capita is referring to the ratio of the CVI™ input--such as industry revenues, nonprofit revenues and jobs--to the number of people within the study area.

CVI™ a comparative indicator of a region's creative vitality, including nonprofit and for-profit arts activities; it reflects the relative economic health of a region's creative economy.

Arts Organizations: organizations that have primary missions related to serving or presenting the arts. These organizations include traditionally subsidized arts organizations such as art museums, symphonies, operas, and ballets.

Arts-Active Organizations: organizations that do not have primary missions related to serving or presenting the arts, but do conduct a number of activities that can be considered "arts-based." For example, within any history museum, there is a significant amount of arts activities associated with exhibit design; the concept reflects a widely accepted trend in arts research to consider how certain creative activities and occupations that do not directly produce art, but are creative and artistic in nature, deserve recognition as vital parts of a creative economy.

Location Quotient (LQ): an index value for each occupation, measuring whether or not

there is a per capita concentration of an occupation within the area being measured; LQs are given for both the state and the nation, showing the relative concentration of employment for an area when compared with the state and with the nation. The location quotient approach is typically used in community analysis and planning to assess basic industries, or those exporting goods.

Creative Vitality Index by Year

The following tables summarize data for California for the years 2006 through 2008. The data show both local and national trends for data fields included within the CVI™. The longitudinal data reveal interesting trends related to how creative industries and nonprofits fared within this region when compared to the rest of the nation. Fluctuations in index values should be considered along side general local, regional, and national trends. The nature of the index accounts for both the influence of national trends and inflation by recalculating national comparison data in each year. This comparative mechanism also allows for an accurate description of local and regional trends, while accounting for the influence of national changes. Sources for the variations of index values in each year shown within the individual data streams are detailed further within this report.

Table# 1
CVI Comparisons: All CA CVI Regions 2006-2008 (Summary)

Region	Index 2006	Index 2007	Index 2008
CA Bay Area	1.67	1.69	1.65
CA Central Coast	1.13	1.16	1.09
CA Central Sierra	0.64	0.67	0.81
CA Central Valley	0.35	0.38	0.34

Comparison of Metropolitan Regions

Table #2 shows CVI™ comparison data for eleven different Metropolitan Statistical Areas (MSAs), including Los Angeles, Sacramento, San Francisco, San Diego and San Jose. Los Angeles has the highest MSA CVI out of the eleven regions studied in Table #2 in each of the three study years. MSAs have been identified as appropriate comparison areas given the regional relationships of creative economies. The US Census Bureau defines an MSA as a geographic entity that is defined by the U.S. Office of Management and Budget (OMB) for statistical use. MSAs contain one or more counties with a core urban area and neighboring counties that are highly socially and economically integrated.

A note on CVI™ values, population density, and regional sensitivity is important here. The CVI™ measures the concentration of creative economic activities within a geographic area. While concentration rates, and thus an index value, can be affected by changes in the size of the region being studied, CVI™ values are not necessarily tied to population and population density. For example, some states with low population numbers, such as Alaska, Wyoming, and Nevada, have high CVI™ values when compared to states with much higher populations and urban concentrations. Conversely, areas with high populations or population densities do not consistently have high CVI™ values. Certainly, the complexities of urban, suburban and rural geographies and demographics play a role in the creativity and vibrancy of a region. The adjustable sensitivity of the CVI™ to precise regions is a considerable strength of this measure.

California CVI™ Values and Calculations 2006 through 2008

Tables #3 through #5 shows the summarized data versus the national average from 2006 through 2008. The index values remained relatively consistent from 2006-08, though data indicates a marginal upward trend. However, there are some important variances in the individual index categories illustrated in Tables #3 through #5. While nearly all categories maintained similar index values from 2006 to 2008, the combined category of Art Gallery/Individual Artist Revenues, and the Occupations in the creative economy category showed consistent growth.

California Nonprofit Arts Organization Counts 2008

The State of California reported over 4,800 arts-related organizations within the 2008 database. Theater organizations showed the largest proportional share of art organizations followed by music organizations, singing and choral groups, dance organizations, and arts and culture groups not otherwise classified. Historical societies and Cultural/Ethical Awareness organizations made up the largest proportional share of the state's arts-active organizations.

2008 California Arts Organization Income by Region

Arts organizations are generally qualified within the CVI as organizations with a primary mission in presenting or serving mediums that are traditionally categorized as "the arts." These types of organizations include the traditionally subsidized arts such as visual arts museums, the symphony, the opera, the ballet and the theater. Within the 2008 database, \$2.13 billion in revenues were reported for nonprofit arts organizations. As shown in Chart #8, the greatest proportion of these revenues came from Program Revenues and Contributions in 2008. The region with the highest revenues for this category was Los Angeles County, with \$829 million in total revenue. Organization revenues measured within this study can be affected by the number of organizations reporting from

California CVI 2008 Page 13/60

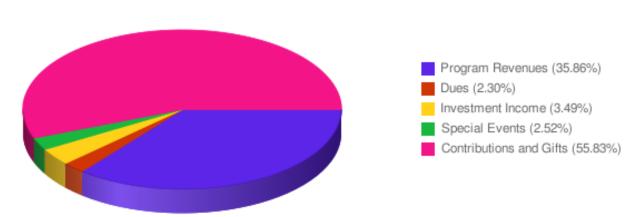

year to year, categorization and general reporting errors as submitted by individual agencies, disbursements of federal grants, and individual organization fundraising efforts, such as capital campaigns. Generally, these fluctuations occur throughout nonprofit revenue measurements across the nation as reported in this study. Due to this, the annual index values provide a more informative indicator of nonprofit organization health, rather than the total revenue figures. However, revenue figures as aggregated within this study provide a substantive approximation of dollar amounts going to nonprofit arts organizations within a reporting period.

Table# 7
2008 Arts Organizations Revenues for California by Region (Summary)

Region	Program	Investment	Special	Contributions,	Membership	Total
	Revenues	Income	Events	Gifts & Grants	Dues	Revenues

2008 Arts-Active Organization Income by Region

Arts-active organizations are generally qualified within the CVI as organizations that do not have primary missions related to serving or presenting the arts, but do conduct a number of activities that can be considered "arts-based." For example, within any history museum, there is a significant amount of arts activities associated with exhibit design. Additionally, there are inherently close ties between humanities, culture and the arts. Within the 2008 database, \$1.83 billion in revenues were reported for nonprofit arts-active organizations. As shown in Table #9, the greatest proportion of these revenues came from contributions, gifts and grants. Organization revenues being measured within this study can be affected by the number of organizations reporting from year to year, categorization and general reporting errors as submitted by individual agencies, disbursements of federal grants, and individual organization fundraising efforts, such as capital campaigns. Generally, these fluctuations are occurring throughout nonprofit revenue measurements across the nation as reported in this study. Due to this, the annual index values provide a more informative indicator of nonprofit organization health, instead of the total revenue figures. Though, revenue figures as aggregated within this study provide a substantive approximation of dollar amounts going to nonprofit arts organizations within a reporting period.

2008 California Photography Store Sales by Region

This category comprises establishments primarily engaged in either retailing new cameras, photographic equipment, and photographic supplies or retailing new cameras and photographic equipment in combination with activities, such as repair services and film developing (US Census Bureau). Table #11 summarizes sales for these types of businesses by region. Total sales for all regions examined for the year 2008 were \$202 million. The region with the highest sales figures for this particular category was Los Angeles County with \$95.2 million. Per capita sales were highest within Los Angeles with an index vale of 2.06. The total index value for all regions examined in Table #11 was 1.17, indicating per capita sales within this category of the CVI to be higher than the national per capita average.

2008 California Musical Instrument Sales by Region

This industry comprises establishments primarily engaged in retailing new musical instruments, sheet music, and related supplies, or retailing new products in combination with musical instrument repair, rental, or music instruction (US Census). Table #12 summarizes sales within these types of businesses by region. Total sales for all regions being examined for the year 2008 was \$468 million. The region with the highest sales figures for this particular category was Los Angeles with \$226 million. Per capita sales were also highest within the Los Angeles region with an index vale of 2.28. The total Index value for all regions examined in Table #12 was 1.27, indicating per capita sales within this category of the CVI to be higher than the national per capita average.

Table# 12
California Musical Instrument Store Sales by Region, 2008 (Summary)

Region	Music Store Sales	Per Capita	Index

2008 California Book and Record Store Sales by Region

This CVI category comprises establishments primarily engaged in retailing new books as well as establishments primarily engaged in retailing new prerecorded audio and video tapes, CDs and records. Table #13 summarizes sales within these types of businesses by region. Total sales for all regions being examined for the year 2008 was \$1.38 billion. The region with the highest sales figures for this particular category was Los Angeles with \$527 million. Per capita sales were highest within the North Coast region with an index value of 2.10. The total index value for all regions examined in Table #13 was 1.32, indicating per capita sales within this category of the CVI to be higher than the national per capita average.

Table# 13

2008 California Individual Artist, Writer and Performer Revenues by Region

This category includes independent (i.e., freelance) individuals primarily engaged in performing in artistic productions, creating artistic and cultural works or productions, or providing technical expertise necessary for these productions (US Census Bureau). Table #15 summarizes sales within these types of businesses by region. Total revenues for all regions being examined for the year 2008 was \$12.1 billion. The region with the highest sales figures for this particular category was Los Angeles with \$9.63 billion. Per capita revenues were also highest within Los Angeles with an index vale of 9.97. The total index value for all regions examined in Table #15 was 3.35, indicating per capita revenues within this category of the CVI to be much higher than the national per capita average.

Table# 15
California Independent Artist Revenues by Region, 2008 (Summary)

The Occupational Index

The Occupational Index of the Arts measures the level of creative occupations per capita in a given geographic area compared with national per capita occupational employment. The CVI™ measures 36 selected occupational categories that are highly correlated with measured skill sets in thinking creatively, originality and fine arts knowledge as measured by the Employment and Training Administration's "O*NET" occupational network database. Given this meticulous selection of occupations, the CVI™ presents an extremely justifiable report on creative economy employment.

Table #17 shows the overall creative employment figures for California by region from 2006 through 2008. During this time period, California added almost 26,000 full-time and part-time jobs within the highly creative 36 employment categories included within the CVI. This is a job growth rate of nearly 4% over these three years. While the majority of this growth took place between 2006 and 2007, the California economy still added 4,000 creative jobs in 2008 despite unfavorable economic conditions.

During this time period, the Bay Area added the greatest number of creative jobs--nearly 10,500. The Central Sierra region showed the greatest percentage increase, growing at a rate of nearly 28% between 2006 and 2008. Only the Inland Northern region and the North Coast Region lost jobs during this time period.

Tables #18 and #19 show the detailed jobs by occupation for the state. The tables indicate which occupations have shown the greatest amount of movement between 2006 and 2008. These detailed employment tables are also included within the report for each individual region studied.

Tables are also included for the state, and for each region for the Location Quotients (LQs) for each individual occupation included within the CVI. LQs, are essentially the "index value" for each individual occupation, measuring

California CVI 2008 Page 21/60

whether or not there is a per capita concentration of an occupation within the study area. LQs are given for both the state and the nation, showing the relative concentration of employment for an area when compared with the state and nation. The national standard LQ is "1.00." The strengths and weaknesses of occupational employment categories as measured by the LQ can provide important information about industry prevalence within a region's creative sector.

The most distinguished feature of the employment data in California is the prevalence of occupations related to the commercial and film industries. LQs show extremely high concentrations of these occupations including: film and video editors, actors, media and communication equipment workers, sound engineering technicians and camera operators. These high concentrations correlate to participation data within the CVI that shows high index values for independent artists, writers and performers and for performing arts participation, which includes revenues for working musicians. The combination of these data points show that the commercial film and music industries within California are significant contributors to the California economy and comprise a prime mover in the creative vitality of California.

It is important to note that in low population areas, there can be large percentage shifts for certain occupations that might not translate into significant changes. Also, certain occupations which have large numbers of part-time participants may have numbers that seem excessive in relation to the population. The most important example here is the photographer occupation, which shows very high employment levels, but it is mainly comprised of freelance and part-time practitioners. In these instances, it is beneficial to focus on the LQ of the occupation, rather than the number of jobs or the percentage change.

Table# 17
California Jobs by Region, 2006 to 2008 (Summary)

County	2006 Jobs	2007 Jobs	2008 Jobs	#Change	%Change	2006 Index	2007 Index	2008 Index

North Coast CVI™ Summary and Occupational Details

North Coast CVI™ summary data shows that the region performs favorably when compared to the United States in most categories. Five individual CVI™ measurements surpass the 1.00 national baseline. The overall CVI™ value measured for the North Coast in 2008 was 1.17. The North Coast displays its greatest strengths within the combined category of individual artists and art gallery revenues, along with the arts-active organization revenues.

California CVI 2008 Page 46/60

Detailed occupational data also reports over 3,680 creative occupations in the North Coast. Highly concentrated occupational employment was measured among agents and fine artists.

Section Four: Technical Report and Understanding the CVI™

While the informational value of this report is immense, the potential benefit to arts advocacy, planning, and policy-making is equally great. In order to realize the practical value of this research, it is important to review and consider the history of the CVI™ and its differentiation from economic impact studies. Some suggestions for making use of the research are also presented here to encourage immediate application of the research. Finally, the sources of CVI™ data are itemized to provide transparency of the research process.

Developing the Creative Vitality Index™

California CVI 2008 Page 57/60

The CVI™ was developed in the context of innovations in cultural policy and economic development. The CVI™ was initially conceived of to help public sector arts agencies clearly communicate that their work encompasses a much larger segment of creative economic activity than had previously been the case. This was necessary because, beginning in the mid 1960s, when state arts agencies were established and city arts agencies were either founded or expanded, the primary focus of these entities was on the growth of the supply and quality of primarily nonprofit-based arts activities.

These entities made great progress in this area. Once the supply and quality of nonprofit arts activities was greatly bolstered, however, the public sector funders of the nonprofit arts field began to consider how their goals and the work of the nonprofit arts were part of a much larger creative system. They also became aware that the nonprofit arts and public arts policy depended on the health of that larger system to survive in the present and thrive in the future.

Simultaneous with these developments, practitioners from fields representing for-profit creative activities and occupations began to discuss the creative economy in broad, highly inclusionary terms. The arts field and public sector arts funders embraced this broader concept as reflective of how they now envisioned their work—as a stimulative part of an overall creative system and not simply as suppliers of funding to maintain a supply of nonprofit-sourced arts opportunities. The CVITM reflects this broader systems-oriented thinking and reinforces the fact that the nonprofit arts and public arts agencies are part of an interdependent whole called the creative sector.

The CVI™ grew out of a conversation about whether to undertake an economic impact study of the arts. The staff leadership of the Washington State Arts Commission and the Seattle Office of Arts & Cultural Affairs, in collaboration with others, explored ways to expand and enrich the economic argument for support of the arts and especially public funding of the arts. In doing so, the group was influenced by two national conversations concerning economic development: the defining of a creative economy and the outlining of the concept of economic development clusters. Those conversations did something the nonprofit arts community was very late in doing- they included the related for-profit creative sector in a universe normally reserved for nonprofits.

The public value work articulated by Mark Moore also played a role in the development of the CVI™. That work helped the public sector component of the nonprofit arts funding community move away from a perspective oriented toward saving the arts to considering ways to be responsive to what citizens wanted in the arts. The approach also worked to shape agency deliverables to reflect their actual value to the public rather than the value arts aficionados considered them to have for the public. One result of this influence was that the CVI™ was developed in a context of thinking in which individuals are assumed to have choices and that, to remain viable, public sector arts funders need to offer choices the public will value and thus select. In this concept of selection is the understanding that choice in the arts ranges outside the nonprofit arts and that the public sector arts agency needs to ensure that such choice is available.

The Relationship of the CVI™ to Economic Impact Studies

Although it evolved from a discussion of whether to commission an economic impact study, the CVI™ is not an economic impact study of the arts. Economic impact studies are enumerations of the total economic value and impact of a specific basket of arts activities on the community, taking into account estimates of the ripple effect on jobs and revenues in other non-related industries. The majority of such studies focus on the nonprofit art sector and either measure its impact exclusively or introduce measures of the impact of selected for-profit activities in a supplementary manner. The CVI™ utilizes some of the data typically included in arts economic impact studies. However it draws on many more data streams, and its goal is quite different in that it seeks to provide an indicator of the relative health of the economic elements of the creative economy.

Economic impact studies are rooted in advocacy and generally have as a core purpose the definition of the nonprofit arts sector as a meaningful component of the larger economic system. The results of such studies are commonly used to argue for the allocation of scarce budget dollars to the arts because a dollar invested in the arts multiplies many times over and helps nurture a more robust overall economy. These studies have also been used to help the arts compete with other discretionary forms of government spending--and often these other interests have their own economic impact studies. The studies have been used most effectively to counteract the misguided notion that funds invested in the nonprofit arts are removed from the economy and thus play no role in building or sustaining it.

Economic impact studies have also been commissioned to call attention to the size and scope of arts and culture as a component of the overall economic activity of an area. Often community leaders and the public are only

California CVI 2008 Page 58/60

familiar with one segment of the arts through their personal acquaintance with a single institution or discipline. The economic impact study aggregates information in ways that call attention to the size and scope of a cluster of endeavors that are often considered to be of minor importance in economic terms. As a result, the prestige of the arts and culture community in an area is enhanced, and the ability of the sector to be heard is often increased.

Although the CVI™ can partially address each of the uses to which economic impact studies are employed, it has a different purpose. The CVI™ is about exploring a complex set of relationships and changes in the dynamics of those relationships over time. It is not a replacement for economic impact studies but can be a complement to them.

Making Use of the Creative Vitality Index™

The Creative Vitality IndexTM is designed to serve as a tool to inform public policy decision making and to support the work of advocates for the development of the creative economy. Here are some of the major uses of the CVITM: As a definitional tool, the index can be used to call attention to and educate the community at large concerning the components and dynamics of the creative economy. Of particular significance is the promotion of the concept that the creative economy includes both the for-profit and the nonprofit arts-related activities of an area. Many economic studies centered on the arts have focused almost entirely on the nonprofit sector, and the inclusion of for-profit activities is, for many, a new conceptualization of the role of the arts in an economy. This approach locates all arts and arts-related creative activities in a continuum of creative activities.

The index can serve as a source of information for advocacy messaging. Individuals engaged in advocacy on behalf of the creative economy as a whole or elements of it can use the index to do some of the following:

- Call the attention of the public to significant changes in the creative economy ecosystem. For example, if contributions from private foundations drop substantially in a year and three major architectural firms leave the area, advocates for a healthy creative economy can call attention to these factors as negative elements that will affect an overall ecosystem. Similarly, if nonprofit arts groups at the same time experience increases in income from individuals and there are substantial increases in employment within other major creative occupations such as graphic design and advertising, the negative impact of the events noted above may be cushioned or alleviated altogether.
- Underscore the economic relationships between the for-profit sector and the nonprofit sector and make the point that a healthy nonprofit arts sector is important to the development of a healthy for-profit sector.
- Advocate for improvements to the allocation of resources or the creation of policies that will increase the index numbers through the expansion of the role of a creative economy in a region.
- Serve as a framework upon which to define and build a creative coalition. With the components of the Index setting forth a vision for a creative community rather than a nonprofit arts community, those who wish to build coalitions to influence change for the benefit of the development of the creative economy have a broader and deeper platform from which to begin the conversation.
- Benchmark an area of endeavor and lay the groundwork for the improvement of one or more aspects of the
 creative economy. The index can serve as an initial diagnostic tool to create a baseline and then can be used
 to measure progress in that area. Elected officials and civic leaders can use the index as a starting point for
 discussing ways in which an area's local economy can be enriched through the development of the
 creative-economy segment of that community.

More on the CVI™ Data Sources

Index data streams are analyzed by WESTAF and taken from two major data partners: the Urban Institute's National Center for Charitable Statistics, and Economic Modeling Specialists, Inc (EMSI).

The Urban Institute's National Center for Charitable Statistics aggregates information from the Internal Revenue Service's 990 forms. The forms are required to be submitted by nonprofit 501(c) organizations with annual gross receipts of \$25,000 or more. Organizations with more than \$25,000 but less than \$250,000 in annual gross receipts can file a 990 EZ form that collects less information. The CVI uses the information contained in the 990 forms to identify changes in charitable giving in an area. These numbers are the best available but are not absolute. Some numbers may not be reported because of errors made in the completion of the form. These include nested fund

California CVI 2008 Page 59/60

transfers within larger fund allocations that include the arts in a significant way but are not broken out, and/or the failure to capture data because an organization is either not required to file a 990 or does not file the full 990 form, thus limiting the level of data available.

Economic Modeling Specialists, Inc.'s (EMSI) expertise is centered on regional economics, data analysis, programming, and design so that it can provide the best available products and services for regional decision makers. In an effort to present the most "complete" possible picture of local economies, EMSI estimates jobs and earnings for all workers using Bureau of Labor Statistics data, data from the U.S. Bureau of Economic Analysis, and information from the U.S. Census Bureau. Because the number of non-covered workers in a given area can be large, job figures from EMSI will often be much larger than those in state LMI data. In order to estimate occupation employment numbers for a region, EMSI first calculates industry employment, then uses regionalized staffing patterns for every industry and applies the staffing patterns to the jobs by industry employment data in order to convert industries to occupations. EMSI bases occupation data on industry data because it is generally more reliable and is always published at the county level, whereas occupation data is only published by Occupational Employment Statistics (OES) region (usually 4-6 economically similar counties). Occupation employment data includes proprietors and self-employed workers. EMSI uses nearly 90 federal, state and private sources including the U.S. Department of Commerce, the U.S. Department of Housing and Urban Development, The U.S. Department of Health and Human Services, the U.S. Postal Service, and the Internal Revenue Service.
